

HW7

1. A
2. B
3. C

4. Find the error:

- The navigation is displaying on the left because of this CSS:
`nav { float: left; }`
- To display the navigation on the right side, change it to:
`nav { float: right; }`

Web Research:

The research explains that mobile web design and web accessibility are closely connected because both focus on making websites easier to use for everyone. Features like clear headings, simple navigation, and responsive layouts help both disabled users and people using mobile devices.

The document also highlights the importance of alternate text for images, readable text sizes, and organized page structures. These features improve accessibility for screen readers and make websites easier to view on smaller screens.

Overall, web developers can support both accessibility and mobile users by creating simple, responsive, and user-friendly websites that work well on all devices.
